

Blackbox •

Houston, we have a heartbeat.

Blackbox: an on-device flight recorder for astronauts.

HOUSTON, WE HAVE NO CLOUD • ZETIC × LIQUID AI × SF TECH WEEK

Planes have black boxes. Astronauts don't.

LOSS OF SIGNAL

Far side of the Moon, solar storms, deep space.

NO VISIBILITY

Mission control can't tell whether the crew is okay.

NO RECORD

Nothing captures what happened while the link was down.

It watches the crew and keeps the log.

○ Detects the crew

Knows when a living crew member is in view.

□ Logs what it sees

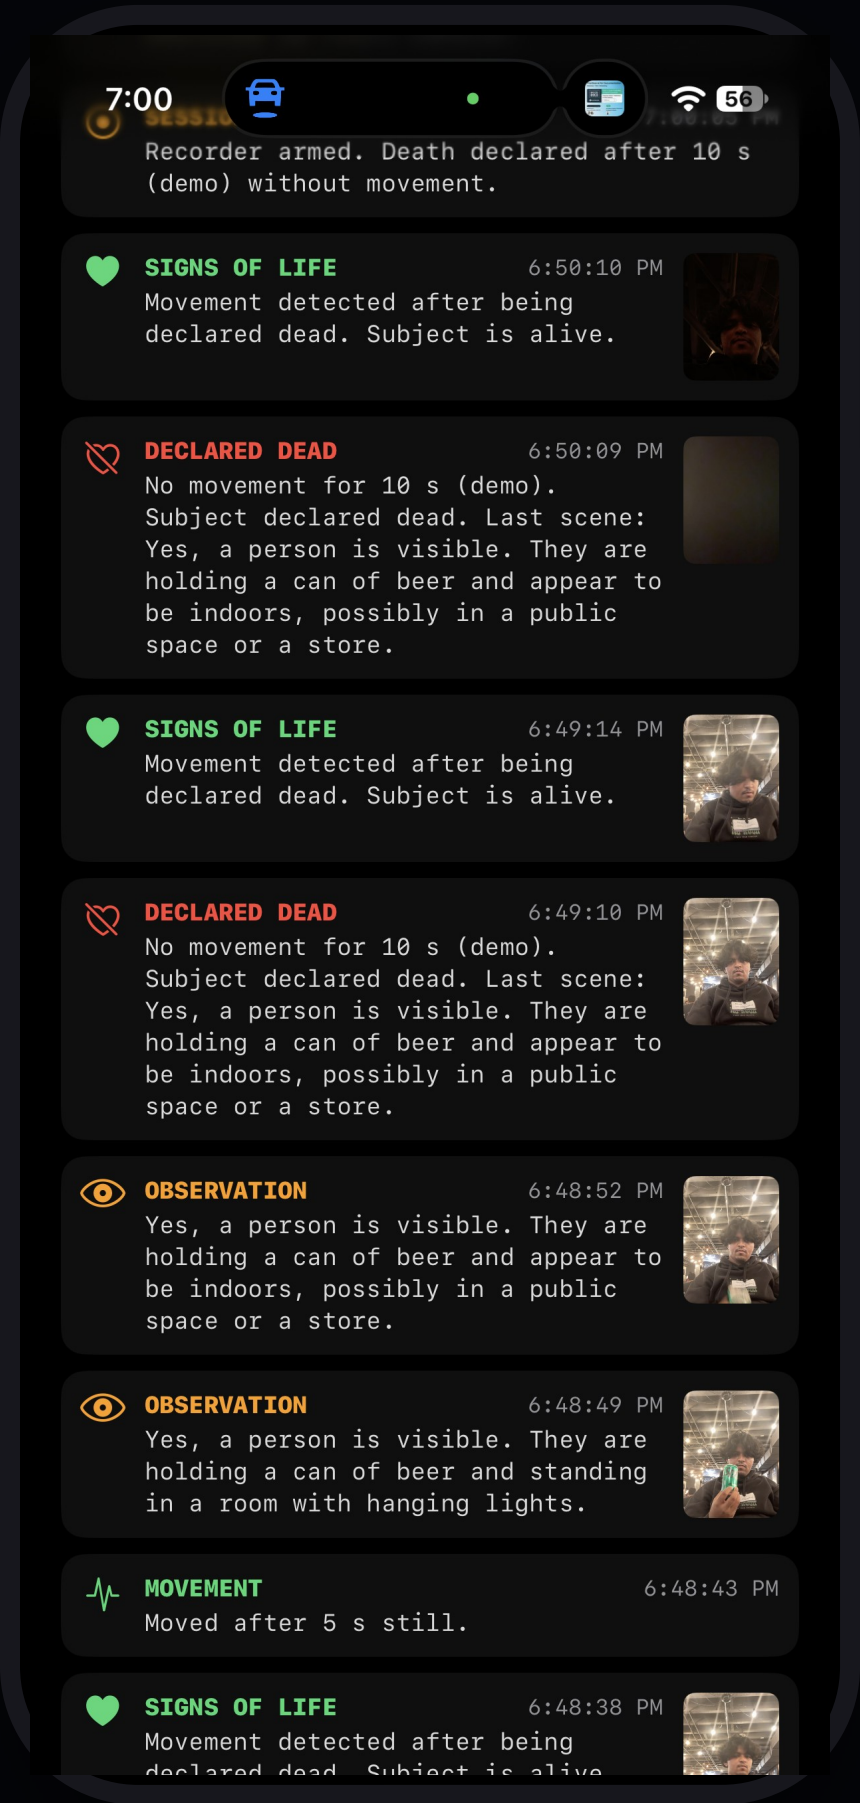

A snapshot and a plain-English description.

◇ Logs bathroom breaks

Yes, astronauts need those too.

● Declares 'no signs of life'

After a period of no movement (10 s in today's demo). Logs "signs of life" when they move again.

Two models, one phone.

In space, the cloud is 384,000 km away.

01

**No connectivity
needed**

02

**Crew data never
leaves the device**

03

Instant response

04

**No cost per
inference**
